

CAD/BIM Modeller

Job Purpose

The Bridges team at CH2M HILL is seeking to build its capacity in BIM services, providing support to our engineers on a variety of major highway and Bridge schemes for National Agencies and Contractors both in the UK and internationally. In addition, we support major local authorities and developers in realizing their bridge related projects, achieved through a fully integrated approach.

Job Responsibilities

- Use your knowledge and skills in CAD to work with the team and other disciplines in providing an integrated service to clients*
- Be part of developing the use of BIM authoring and design review tools throughout the office.*
- Assist in the design process by applying best modelling, draughting and detailing practice in the development of solutions whilst achieving best value in delivering our services*
- Manage your own time and potentially that of others*
- Contribute to the continuous improvement of departmental modelling and detailing standards*

Qualifications and Experience

- Dynamic, enthusiastic individuals with a sound knowledge of CAD practices, preferably with experience or a keen interest in bridge engineering*
- Fluency in AutoCAD is essential, with developing knowledge of BIM authoring and design review tools from either Bentley or Autodesk desirable. .*
- Formal qualification is desirable but suitable knowledge and relevant experience gained within a design office or contracting organization is essential*
- Computer literate*
- Knowledge of relevant industry standards and codes of practice*
- Fluency in spoken English*
